(84) Designated States (regional): ARIPO patent (BW, GH, GM, KE, LS, MW, MZ, SD, SL, SZ, TZ, UG, ZM, ZW), Eurasian patent (AM, AZ, BY, KG, KZ, MD, RU, TJ, TM), European patent (AT, BE, BG, CH, CY, CZ, DE, DK, EE, ES, FI, FR, GB, GR, HU, IE, IT, LU, MC, NL, PT, RO, SE, SI, SK, TR), OAPI patent (BF, BJ, CF, CG, CI, CM, GA, GN, GQ, GW, ML, MR, NE, SN, TD, TG).

Declaration under Rule 4.17:

of inventorship (Rule 4.17(iv)) for US only

Published:

- with international search report
- before the expiration of the time limit for amending the claims and to be republished in the event of receipt of amendments
- (88) Date of publication of the international search report: 19 August 2004

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.

(57) Abstract: An improved nickel-chromium-iron alloy is provided, which comprises up to about 5% of hafnium-containing particles. In one embodiment, an improved creep resistant castable oxide dispersion strengthened nickel-chromium-iron alloy comprises up to about 5% of hafnium, with at least part of the hafnium being present as finely dispersed oxidised particles. Further embodiments of the improved alloy can comprise additionally up to about 15% by weight aluminium. The alloy is particularly useful in the production of creep resistant tubes and castings, for example, for the petrochemical market.

tionar application No. PCT/GB 03/04665

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)
This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
2. X Claims Nos.: 21, 22,39, 40,44,46,47,50 because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically: see FURTHER INFORMATION sheet PCT/ISA/210
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)
This International Searching Authority found multiple inventions in this international application, as follows:
see additional sheet
As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. As only some of the required additional search fees were timely paid by the applicant, this international Search Report covers only those claims for which fees were paid, specifically claims Nos.:
•.
4. No required additional search fees were timely paid by the applicant. Consequently, this international Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
1-19, 24, 26-38, 41, 45, 51, 52
Remark on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.
· · ·

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.2

Claims Nos.: 21, 22,39, 40,44,46,47,50

The above mentioned claims contain undefined and obscure subject-matter and does not comply to Rule 6.2(a) PCT.

The applicant's attention is drawn to the fact that claims relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure. If the application proceeds into the regional phase before the EPO, the applicant is reminded that a search may be carried out during examination before the EPO (see EPO Guideline C-VI, 8.5), should the problems which led to the Article 17(2) declaration be overcome.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. claims: 1-19,24,26-38,41,45,51,52

Oxide dispersion strengthened Ni-Cr-Fe alloy, containing Hf as fine oxide particles, at least one carbide forming element other than Cr, Nb, Ti, W, Ta and Zr, having improved creep resistance, carburisation resistance at high temperatures; method of alloy production The subject-matter of group 1 concerns the problem of improvement of carburisation and creep resistance at high temperature of Ni-Cr-Fe alloys, which is solved by having fine Hf oxide particles, hence the presence of Hf oxide particles is considered to be the special technical feature.

2. claim: 20

Ni-Cr-Fe alloys containing Hf; The second group (claim 20) does not define the presence of Hf oxide particles, and since it does not contain the special technical feature, a lack of unity exists.

3. claims: 23, 42, 43

Ni-Cr-Fe alloy comprising up to 5%Hf-containing particles. It is known to have a Ni-Cr-Fe alloy containing up to 5% hafnium carbide particles (see Partial International Search Report, D2, col. 1, line 45-56; col. 2, l. 14-17). Since these claims do not define alloys containing Hf oxide particles, the special technical feature is absent from these claims.

4. claims: 25, 48, 49

Ni-Cr-Fe alloy comprinsing up to 15%Al and up to 5%Hf-containing particles. As mentioned above, it is known to have a Ni-Cr-Fe alloy containing up to 5%Hf and its hafnium particles being carbides (see Partial International Search Report D2, col. 1, line 45-56; col. 2, line 14-17). The subject-matter of these claims is distinguished by the presence of up to 15%Al in the alloy. The technical effect of Al in the alloy is different to the one of Hf oxide, such that there is no common special technical feature.
